THE CITY AS THE CANVAS

BUILT FOR THE COMMUTE

ALPHA AT STREET SCALE

DIGITAL EXPERIENCE

ALPHA CITY RUN brings Alpha Industries x *Subway Surfers* to the streets of New York. Players customize their avatar, sprint through NYC-inspired environments, collect A-Tokens, and unlock exclusive MA-1 colorways, with top weekly runners earning a real Alpha Industries MA-1.

GEN Z PREFERSTOPLAY ADS

Alpha’s next customer is 16–28, lives on their phone, and values what they earn over what they’re shown. Gentle Monster already proved the model: a fashion brand’s own app game can top the charts and turn play into purchase. Alpha City Run applies that playbook to the MA-1.

**Gentle Monster : Gentle Garden
(2022)**

A standalone 8-bit app game with BLACKPINK’s Jennie. Weekly top-10 players won real eyewear from the drop – servers crashed from demand on day one.

**Louis Vuitton : Louis: The
Game**

A branded mobile adventure game that carried the maison’s anniversary story to millions of downloads.

THE PLAYER EXPERIENCE

Who

- 6–28 Gen Z and Millennials, native to TikTok and casual mobile games
- Streetwear curious future first jacket buyers
- Secondary: existing Alpha fans pulled in by the drop draws

What They Feel

- Nostalgia : the mechanic is instantly familiar
- Earned Pride : the jacket is a trophy, not a purchase
- Belonging : part of an NYC street-culture world

What They Share

- Fit Check shots in unlocked colorways
- Unlock moment reactions and leaderboard screenshots – all under #AlphaCityRun

AI Disclosure

AI was used as a visual production tool to generate selected campaign imagery and mockups based on the creative direction developed by our team. All strategic thinking, campaign concepts, audience development, creative direction, copywriting, and final design decisions were developed and curated by the team.

This project was developed with limited support from generative AI tools, specifically ChatGPT (OpenAI), Google Gemini, InVideo AI, Figma Emailify, and Claude (Anthropic). These tools were used to assist with prompt development, design exploration, email layout generation, video generation, and editing support for this disclosure document. All research, strategic thinking, brand analysis, creative direction, design decisions, and final project outcomes are entirely our own.

1. Tools Disclosed

ChatGPT (OpenAI) — used to generate and refine campaign imagery concepts, develop image prompts and visual direction, and provide minor grammar and clarity support for written project materials.

Google Gemini — used to generate video footage of figures wearing Alpha Industries bomber jackets, along with soundscape elements incorporated into the final campaign video.

InVideo AI — used to generate additional video footage of figures wearing Alpha Industries jackets, also incorporated into the final campaign video.

Figma Emailify — used for email layout generation.

Claude (Anthropic) — used to combine and edit this disclosure document into a single cohesive statement.

2. Description of Use

ChatGPT was used to generate AI-created mockups exploring the relationship between Alpha Industries' military heritage, NYC street culture, and gaming, in support of the Alpha City Run campaign. This included visualizing game environments, avatar styling, NYC-inspired settings, and user interface concepts. ChatGPT also assisted with minor wording, sentence structure, and clarity in supporting documentation.

Video and image content was generated using Gemini, ChatGPT and InVideo AI. Footage from both tools was cut and spliced together into a cohesive video with an accompanying soundscape. Example prompts used include: a DJ in an Alpha Industries jacket loading gear into a van; a doorman in an Alpha Industries jacket holding a door open; a man in an Alpha Industries jacket dismounting a bike; and ambient morning sounds of lower Manhattan. An example ChatGPT image prompt used was a request to create a "subway surfer" style advertising photo for a fictional game called "Alpha City Runs," set against a New York City MTA subway backdrop, with avatars wearing the MA-1 bomber jacket.

AI tools were not used to conduct research, develop strategy, determine brand positioning, create marketing recommendations, analyze findings, or make final creative or design decisions.

3. Rationale for Use

AI video tools were used so the group could collaborate on this project while working across different locations. ChatGPT was used to accelerate creative exploration and visual prompt development during the concept phase.

4. Human Oversight and Editorial Control

All AI-generated content was reviewed and curated by the students. Creative direction, concept development, sequencing, brand analysis, and final editorial decisions were made by the students. AI-generated outputs served as development aids and exploration tools rather than sources of original research, strategic insight, or final creative decision-making. This disclosure document itself was drafted from two source documents and combined into its current form with Claude's editing assistance; the underlying content, tool usage, and rationale described here reflect the students' own account of their process.

5. Attestation

We attest that the information above accurately describes the use of AI tools in the creation of this project, in accordance with course and institutional policy on AI disclosure.
